Objective

Aspiring AI Engineer with hands-on experience building and deploying end-to-end ML systems using Python, Scikit-learn, XGBoost, TensorFlow, FastAPI, and Streamlit. Seeking an AI Engineer Internship to apply practical ML skills and contribute to real-world AI products within a production-focused team

Education

Bachelor of Computer Science

2023 – 2027

Faculty of Computers and Information – Tanta University | GPA: 3.01

Experience

AI for Business Engineer | National Training Initiative (NTI)

Mar 2026 – May 2026

- Applied supervised and unsupervised ML algorithms to real-world business datasets, completing hands-on assignments across classification, regression, and clustering tasks.
- Built and evaluated ML models using performance metrics and model selection techniques, with focus on practical deployment readiness.
- Implemented deep learning architectures (ANN, CNN, RNN) through practical sessions on business-relevant use cases using TensorFlow/Keras.

Data Scientist | Digital Egypt Initiative

Jun 2025 – Dec 2025

- Developed end-to-end ML pipelines covering data cleaning, EDA, feature engineering, and predictive modeling using Python, Pandas, and Scikit-learn.
- Built classification and regression models on real-world datasets with structured evaluation using cross-validation and performance metrics.
- Collaborated in a team-based environment to analyze and solve business data problems.

Projects

Real Estate Investment Intelligence System

- Developed an end-to-end AI-powered system for automated property valuation and investment opportunity analysis, aligned with real-world banking and credit assessment use cases.
- Trained an XGBoost regression model with advanced preprocessing (log transformation) to handle price skewness, alongside a classification model to detect overpriced properties.
- Designed a weighted recommendation engine using Nearest Neighbors to prioritize user budget and ROI constraints, enabling data-driven investment decisions.

Github: [UAE Real Estate](#)

- Built a full ML pipeline including data preprocessing, model evaluation, and deployment using FastAPI and Streamlit for real-time insights and interactive analytics.
- Integrated data-driven insights to support decision-making and automation workflows in investment analysis.

Safe Eye – Road Safety AI | Team Leader & ML Engineer

Top 10 Finalist – LUXSAI SUMMIT 2026 Hackathon

- Developed a real-time accident detection and traffic congestion monitoring system using YOLOv8 and Computer Vision.
- Led the technical team in designing system architecture and integrating the AI model with the backend pipeline.
- Deployed the model to deliver real-time alerts and interactive data visualization.

Movie Recommendation System

- Built a two-stage recommendation system (Retrieval + Ranking) using TensorFlow & MovieLens 1M dataset.
- Implemented Two-Tower Neural Network for candidate retrieval and DNN ranking model for rating prediction.
- Deployed a full ML pipeline using FastAPI + Streamlit.

GitHub: [Movie-Recommendation-Systems](#)

Trip Price Prediction

- Trained an XGBoost regression model on ~100K trip records achieving MAE $\approx$ 1.20.
- Built a full preprocessing pipeline using Scikit-learn and deployed the model via FastAPI + Streamlit.
- Applied KMeans clustering and DBSCAN anomaly detection to analyze ride patterns and pricing anomalies.

GitHub: [Trip-Price-Prediction](#)

Live Demo: [Trip Price Prediction Streamlit](#)

Drone Delivery Route Optimization

- Implemented a Genetic Algorithm to optimize drone delivery routes under real-world constraints.
- Designed the fitness function and tuned GA parameters (mutation rate, crossover, population size).
- Collaborated with a team to deliver the final solution and technical report.

GitHub: [Drone-Delivery-Route-Optimization](#)

Courses & Certifications

Deep Learning Specialization – DeepLearning.AI (Coursera)

- Neural Networks and Deep Learning (Apr 2026)

Machine Learning Specialization – DeepLearning.AI (Coursera)

- Supervised Machine Learning: Regression and Classification (Oct 2025)
- Advanced Learning Algorithms (Dec 2025)
- Unsupervised Machine Learning (Feb 2026)

AI & ML Training – National Training Initiative (NTI) with Huawei

Dec 2025 – Feb 2026

- Explored the foundations of Neural Networks and applied core ML algorithms; gained introductory exposure to Deep Learning, Computer Vision, and NLP concepts.

Skills

Programming Languages: Python, SQL, MongoDB, C++ (Basic)

Machine Learning: Supervised Learning, Model Evaluation, Feature Engineering, Hyperparameter Tuning

Deep Learning: ANN, CNN, RNN (TensorFlow / PyTorch), Backpropagation, Model Training & Optimization, Transfer Learning

Data Processing: Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA)

Libraries: Pandas, NumPy, Matplotlib, Scikit-learn, XGBoost, TensorFlow, PyTorch

Unsupervised Learning: KMeans, PCA, DBSCAN

Deployment: FastAPI, Streamlit

Tools: GitHub, Version Control

Languages

Arabic: Native

English: Intermediate
